

Profile

Mid-level mobile developer with 5+ years of experience building cross-platform applications using Flutter, React Native, and Ionic. Passionate about creating seamless user experiences and optimizing performance. Proven track record of delivering high-quality apps at scale for leading Egyptian tech companies like Swvl, Vezeeta, and Instabug. Strong foundation in both Android and iOS native development, with expertise in Dart, TypeScript, and modern mobile architectures.

Experience

Junior Mobile Developer 2019-07 — 2020-12
Swvl

Assisted in the development and maintenance of the Swvl passenger and driver mobile applications using React Native. Implemented new features such as real-time tracking and payment integration. Collaborated with cross-functional teams to ensure smooth app performance.

Mobile Developer 2021-01 — 2022-06
Vezeeta

Developed and optimized the Vezeeta healthcare booking app using Flutter. Built reusable widgets, integrated Firebase for analytics and push notifications, and improved app load time by 30%. Worked in an Agile team with bi-weekly sprints.

Flutter Developer 2022-07 — 2023-12
Instabug

Contributed to the Instabug SDK and internal tools using Flutter and Dart. Developed cross-platform UI components, wrote unit and widget tests, and improved the SDK's performance on low-end devices. Participated in code reviews and mentorship of junior developers.

Cross-Platform Mobile Developer 2024-01 — Present
Paymob

Leading the mobile development of Paymob's merchant payment terminal app using Flutter. Designing scalable architecture with Bloc state management, integrating REST and GraphQL APIs, and ensuring PCI compliance. Spearheading the migration of legacy native features to Flutter.

Education

Bachelor of Science in Computer Engineering 2018-06
Cairo University, Faculty of Engineering

Projects

flutter_rust_bridge

Flutter/Dart <-> Rust binding generator, feature-rich, but seamless and simple.

thrift

Apache Thrift

localsend

An open-source cross-platform alternative to AirDrop

open-location-code

Open Location Code is a library to generate short codes, called "plus codes", that can be used as digital addresses where street addresses don't exist.

saber

The cross-platform open-source app built for handwriting
