Summary

Highly motivated Junior Machine Learning Engineer with 2 years of experience in building, optimizing, and deploying machine learning models. Proficient in Python, TensorFlow, PyTorch, and transformer architectures. Passionate about applying deep learning to solve real-world problems in NLP and computer vision. Actively contributes to open-source projects and stays updated with the latest ML research.

Experience

ML Engineer at Swvl

2023-07 – Present

Develop demand forecasting models using LSTMs and XGBoost to optimize ride dispatching. Implemented model serving via Docker and AWS SageMaker, reducing inference latency by 30%. Collaborated with data engineering team to build ETL pipelines for real-time data ingestion.

Junior ML Engineer at Paymob

2022-08 – 2023-06

Designed fraud detection classifiers using ensemble methods and deep learning, achieving 95% accuracy. Built automated ML pipelines with MLflow for experiment tracking and model registry. Prepared data using SQL and Pandas, and deployed models via REST APIs.

ML Engineering Intern at Instabug

2021-09 – 2022-06

Assisted in building sentiment analysis models for app reviews using BERT and Hugging Face Transformers. Developed preprocessing scripts for text data and evaluated model performance using Precision, Recall, and F1-score. Participated in daily stand-ups and code reviews.

Data Science Intern at Vezeeta

2021-06 – 2021-08

Performed exploratory data analysis on patient appointment data to identify no-show patterns. Built a logistic regression model to predict appointment cancellations, leading to a 10% reduction in no-shows. Created dashboards with Tableau for business stakeholders.

Education

Bachelor of Science in Computer Engineering — Cairo University (2022-06)

Skills

Python C++ TensorFlow PyTorch Transformers Scikit-learn Deep Learning NLP Git Docker
Linux SQL AWS Jupyter Pandas NumPy MLOps

Projects

[system-design-primer](#)

Learn how to design large-scale systems. Prep for the system design interview. Includes Anki flashcards.

[awesome-python](#)

An opinionated list of Python frameworks, libraries, tools, and resources

[project-based-learning](#)

Curated list of project-based tutorials

[Python](#)

All Algorithms implemented in Python

[tensorflow](#)

An Open Source Machine Learning Framework for Everyone

Certifications

AWS Certified Machine Learning – Specialty — Amazon Web Services
TensorFlow Developer Certificate — Google
