EXPERTISE

Python	Kotlin	PHP	Java	LlamaIndex
LangChain	Spring Boot	Rails	Cassandra	
Supabase	Neon	Kafka	Git	Kubernetes
Jenkins	AWS	Heroku	Anthropic	
OpenAI API	AWS Bedrock	Google Gemini		
GraphQL	Microservices			

Profile

Engineering leader with deep technical background in Python, Kotlin, and PHP. 10 years of experience delivering enterprise-scale solutions.

Career

Backend Developer 2024-11–Present

Figma
Built event-driven architecture using Railway, processing 50000+ events daily
Architected and built RESTful APIs serving 10000+ requests/day using GCP, reducing response time by 20%
Optimized database queries using LlamaIndex, improving query performance by 37%
Created authentication and authorization system using GCP, securing 100000+ user accounts

Backend Developer 2022-12–2024-10

Twilio
Optimized database queries using Scrum, improving query performance by 33%
Designed and implemented microservices architecture using Replicate, handling 100+ concurrent users

Server-Side Developer 2019-04–2022-09

HashiCorp
Mentored team of 5 junior developers on CI/CD best practices
Created authentication and authorization system using Hugging Face, securing 10000+ user accounts
Reduced infrastructure costs by 38% through optimization using MySQL

API Developer 2017-08–2019-01

ResumeAI
Implemented caching layer with Claude API, reducing database load by 16%
Built automated CI/CD pipelines with Claude API, reducing deployment time by 27%

Server-Side Developer 2014-12–2017-08

Palantir
Developed real-time data processing pipeline using Python, handling 500+ users/second
Built event-driven architecture using Docker, processing 500+ events daily
Implemented caching layer with Docker, reducing database load by 38%
Built event-driven architecture using Python, processing 5000+ events daily

Education

B.Sc. in Cybersecurity
Georgia Tech, 2013

B.Tech. in Mathematics
Purdue University, 2012

Projects

GraphQL Server
Built Auth Service using LlamaIndex and Python, enabling automated processing and improving efficiency by 40%

File Processing Service
Created REST API Framework leveraging Python for core functionality and Spring Boot for optimization

Search Engine
Developed API Gateway using Rails, reducing processing time by 60% through algorithmic improvements

REST API Framework
Developed Database Proxy using Spring Boot, reducing processing time by 60% through algorithmic improvements

Additional

Passionate about developer tools and building technology that makes a difference.
Dutch (Conversational)
Passionate about accessibility and building technology that makes a difference.
