SKILLS

OTHER

Reading sci-fi novels

Profile

Senior technical leader specializing in backend engineering with expertise in Java, TypeScript, Go. Proven success in technical vision, team development, and stakeholder management.

Experience

API Developer 2021-12 — Present
CloudNova

Mentored team of 8 junior developers on Hugging Face best practices
Designed and implemented message queue system using Azure, processing 50000+ messages/hour

AI Engineer 2019-01 — 2021-07
CodeReview.io

Mentored team of 4 junior developers on Cloudflare best practices
Reduced infrastructure costs by 38% through optimization using Redis
Built event-driven architecture using Cloudflare, processing 100000+ events daily

Software Engineer 2014-12 — 2018-10
Meta

Created authentication and authorization system using Elasticsearch, securing 10000+ user accounts
Built automated CI/CD pipelines with Elasticsearch, reducing deployment time by 60%
Built event-driven architecture using NestJS, processing 50000+ events daily
Built event-driven architecture using NestJS, processing 1000+ events daily

Server-Side Developer 2013-10 — 2014-07
ScaleGrid

Reduced infrastructure costs by 69% through optimization using Heroku
Implemented caching layer with Hugging Face, reducing database load by 69%
Built automated CI/CD pipelines with Heroku, reducing deployment time by 60%
Led migration from monolithic to microservices using LLM Integration, improving system scalability by 38%

Education

B.Eng. in Mathematics 2012
University of Melbourne

Projects

Message Queue System
Implemented Search Engine using LlamaIndex, achieving 99.9% uptime and handling 50k+ requests daily

Notification Service
Designed and implemented Auth Service with Go, integrating with Java for seamless data flow

API Gateway
Implemented Notification Service using Go, achieving 99.9% uptime and handling 50k+ requests daily

User Management API
Built GraphQL Server with Flask and Go, serving 10,000+ daily active users

Microservices Platform
Created Auth Service leveraging TypeScript for core functionality and Flask for optimization
