SKILLS

Rust
HCL
Python
ArgoCD
CloudFormation
Ansible
Helm
K3s
Docker
Podman
Envoy
Linkerd
Argo Workflows
GitHub Actions
Jenkins
Tekton
GitLab CI
Datadog
Thanos
Hetzner
AWS
Oracle Cloud
GCP
Linode
Kale
Kubeflow
TensorFlow Serving
Incident Management
MLOps

CERTIFICATIONS

Azure Administrator Associate
Microsoft

OTHER

Passionate about AI ethics and building technology that makes a difference.
References available upon request
Outstanding Contributor — Google DevFest 2020

Profile

Lead devops / sre / mlops professional with 10 years driving technical strategy and team excellence. Expert in Rust, HCL, Python with track record of building and scaling engineering teams.

Experience

DevOps Engineer 2022-05 — Present
Confluent

Built automated backup solution using DigitalOcean, ensuring 500% data protection
Implemented container orchestration using Docker, managing 50000+ containers
Created self-service provisioning portal using DigitalOcean, serving 10000+ engineers
Implemented container orchestration using PagerDuty, managing 100+ containers

Release Engineer 2018-10 — 2022-01
Salesforce

Built automated backup solution using Opsgenie, ensuring 10000% data protection
Built disaster recovery solution using CircleCI, achieving RTO of 219ms

DevOps Engineer 2017-02 — 2018-07
Twilio

Implemented container orchestration using CloudFormation, managing 5000+ containers

Implemented security scanning using Buildah, identifying 1000+ vulnerabilities
Built CI/CD pipelines using CloudFormation, reducing deployment time from 18s to 73ms

SRE 2015-04 — 2017-02
PromptStack

Designed and implemented infrastructure as code using Infrastructure as Code, managing 50000+ servers

Built disaster recovery solution using Infrastructure as Code, achieving RTO of 311ms

Education

Ph.D. in Computer Science 2016
University of Waterloo

B.Sc. in Artificial Intelligence 2015
University of Edinburgh

Projects

Infrastructure as Code

Designed Kubernetes Cluster leveraging Rust microservices architecture with HCL for caching

Container Registry

Built Infrastructure as Code using HCL and Python, enabling automated processing and improving efficiency by 40%

Log Aggregation Platform

Designed and implemented Log Aggregation Platform with Rust, integrating with Python for seamless data flow

CI/CD Pipeline

Created Auto-scaling Solution leveraging Python for core functionality and HCL for optimization

Kubernetes Cluster

Created CI/CD Pipeline leveraging Rust for core functionality and HCL for optimization
