Timeline

- 2025-10 — Present
SRE
- 2024-04 — 2025-07
MLOps Engineer
- 2021-05 — 2024-03
MLOps Engineer
- 2017-11 — 2020-12
DevOps Engineer

Summary

Senior devops / sre / mlops engineer with 7 years of experience architecting and delivering enterprise solutions. Expert in HCL, Python, PowerShell with demonstrated leadership in cross-functional teams.

Experience

SRE at ScaleGrid

2025-10 – Present

Built disaster recovery solution using MLOps, achieving RTO of 449ms
Established GitOps workflows using CircleCI, improving deployment frequency by 28%
Implemented log aggregation using Crossplane, processing 5000+ logs/day
Built disaster recovery solution using MLOps, achieving RTO of 199ms

MLOps Engineer at ScaleGrid

2024-04 – 2025-07

Built automated backup solution using Kubernetes, ensuring 1000% data protection
Created monitoring and alerting system using Platform Engineering, reducing MTTR by 27%
Implemented container orchestration using Platform Engineering, managing 50000+ containers
Built CI/CD pipelines using Jenkins, reducing deployment time from 4s to 62ms

MLOps Engineer at DeployFast

2021-05 – 2024-03

Implemented log aggregation using Platform Engineering, processing 10000+ logs/day
Created monitoring and alerting system using Azure, reducing MTTR by 50%

DevOps Engineer at Confluent

2017-11 – 2020-12

Created self-service provisioning portal using GitOps, serving 1000+ engineers
Established chaos engineering practices using VictoriaMetrics, improving system resilience
Built automated backup solution using Infrastructure as Code, ensuring 50000% data protection

Education

B.Tech. in Artificial Intelligence — University of Washington (2019)

Skills

HCL, Python, PowerShell, Go, Rust, ArgoCD, Pulumi, Crossplane, K3s, Buildah, Envoy, Docker, Argo Workflows, Azure DevOps, Grafana, Thanos, PagerDuty, GCP, Azure, AWS, TorchServe, MLflow, TensorFlow Serving, Kale, Triton Inference Server, Chaos Engineering, Zero Trust, MLOps, GitOps

Projects

Monitoring System

Built Container Registry using HCL and Python, enabling automated processing and improving efficiency by 40%

Secrets Management

Designed and implemented Secrets Management with Rust, integrating with PowerShell for seamless data flow

Observability Dashboard

Designed and implemented Monitoring System with HCL, integrating with Python for seamless data flow

Chaos Engineering Framework

Designed Auto-scaling Solution leveraging HCL microservices architecture with Python for caching
